

BERNARDYŃSKA 4

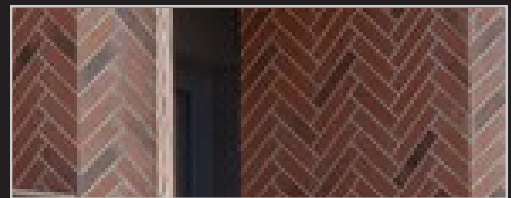

WROCLAW, POLAND

Located in the heart of Wrocław, Poland, Bernardyńska 4 is redefining residential design with a façade made almost entirely of custom-manufactured thin brick. Designed by Maćków Design Studio, this five-story luxury apartment complex proves that the right materials don't just finish a building, they shape its character.

The architects worked directly with King Klinker to develop a **custom red thin brick** with a color and texture that pays tribute to the city's expressionist architecture while delivering a fresh, modern edge. The result is a zigzagging, sculptural façade that complements its historic surroundings while drawing renewed attention to the area's architectural heritage.

Winner of the top prize in the 2024 "Object of the Year in Aluprof Systems" competition, Bernardyńska 4 stands out for its innovation, sustainability, and architectural sensitivity. Located near the medieval Bernardine monastery and a 20th-century post office, the building incorporates stepped-back upper levels, decorative cornices, and open loggias—all unified by the custom thin brick that connects past and present.

THIN BRICK BREAKDOWN
