◆ SILENCER CENTER DISTRIBUTION CENTER | SIOUX FALLS, SOUTH DAKOTA

Silencer Central's new 63,000 sq. ft. distribution center is a major milestone in the company's expanding operations. Its architectural presence is defined by the use of Black Sands Modular thin brick from King Klinker America, applied as a striking exterior accent. This premium thin brick elevates the building's aesthetic with a clean, modern edge while maintaining durability and long-term performance.

Inside, the \$12.2 million facility features an advanced OPEX automation system to streamline order fulfillment, along with a 3D print room, on-site gun range, gunsmithing area, and contemporary office spaces overlooking the warehouse floor. The project enhances operational capabilities, supports new job creation, and contributes to the continued economic growth of Sioux Falls—all wrapped in a bold, thin-brick-enhanced exterior.

CERTIFIED TO ASTM C1088-24 (GRADE EXTERIOR, TYPE TBX/TBS). KING KLINKER THIN BRICK PASSES PCI PULL OUT TESTS FOR ALL COLORS.
